SET THE STANDARD

Don't Just Manage Climate Risks.
Turn Them Into Opportunities.

You

Get A Better Return On GHG Investments
With ClimateCHECK

Us

As a company or investor, your value tomorrow depends on how you manage climate risk today. GHG management strategies—such as reducing greenhouse gas emissions and waste, switching to clean fuels and technologies, and increasing efficiency—is an important first step.

But smart companies recognize an opportunity to go beyond that. The climate and the carbon markets go hand in hand. It's the difference between simply managing climate risk and creating opportunities.

Enter ClimateCHECK.

We engage organizations to make smart GHG management decisions so they get a better return on investment. Choosing the right protocols and partners isn't easy. You need the right expertise, information and tools to design and implement a sound strategy.

Look to us. We help you measure and manage GHG emissions, create tradable carbon credits, and develop new products and technologies to enhance your competitive edge. Result? You get a *double dividend*. You better the climate. And you better your returns.

ClimateCHECK helps companies and investors get a better return on their GHG investments by capitalizing on carbon markets, managing their footprint more efficiently, and investing in clean technologies with the right standards and strategies.

Where Others See Costly Processes, We See Opportunities

Our team can help you do much more than document and manage your GHG emissions. Whether you're invested in clean technologies, products, or projects, we can help you optimize your investment.

It takes a deep understanding of all the programs, standards, and protocols and a practical, customer-centered approach to put it all together. When you set the standard, you increase profitability.

Get a Better Return with Our Climate Services

Our climate services help you set the standard, going beyond compliance to see the opportunity to generate better returns. Our clients range from large, corporate GHG reductions programs to investors in clean technologies to clean technology companies themselves. Our services include:

- Climate coaching to optimize your programs, technology investments, and GHG management
- Auditing the auditors
- Advising GHG programs by establishing the processes for buying and selling credits
- Determining and supporting the quality of your offsets
- Authoring and validating protocols
- Developing and delivering GHG training courses
- Verifying clean technologies, inventories, and projects

How We Can Help You Get Business Results

GHG management is about more than creating inventories and buying and selling credits. Whether you're an investor, large emitter, or solution provider, our innovative GHG management services and tools are designed to increase your return on investment. And, because our experience spans virtually every industry and sector, chances are we already understand yours.

Our services are customized to bring you business results, including:

Developing practical standards you can trust.

Stringent verification is meaningless without the right standard. When you invest in a project or company that isn't founded on best practices and standards, you also take on significant risk. We work with you to set the standard, developing your methodology so your investments deliver a better return.

Implementing effective programs to manage GHG emissions.

Many companies can help you create inventories of your GHG emissions. But your management systems may not deliver the expected returns. We establish GHG action plans to help you meet your targets. We also help you identify emissions credits you may not have known about. And we can train your team so they can efficiently manage your GHG program. You can expect more than just compliance from your GHG investment.

Optimizing emissions reduction projects.

Many projects under-perform because of poorly designed protocols. Our expertise across industries, our knowledge of GHG standards, and our tools and verification enable us to optimize your project performance. And that means better returns for your business.

What Makes Us Different

Founded by climate change and clean technology experts, ClimateCHECK represents a new breed of values-driven organization—practical, credible and innovative. Our experience, leadership, and collaborative approach enable us to deliver GHG management solutions you can trust.

Experience.

We've completed over 200 projects since 1998, including:

- Global, corporate GHG inventory verification
- Clean technology investment and performance evaluations
- CDM project validations
- Carbon credit projects
- Carbon-neutral product verifications
- GHG program design and management for governments and major corporations

Leadership.

We've authored leading standards, training courses, and GHG programs.

- We were the main author of ISO 14064-2 International Standard for GHG Project Accounting, which was adopted by the Voluntary Carbon Standard—the premier international system for carbon credits.
- We've authored handbooks and training courses on the leading GHG accounting and verification standards and protocols, including WRI/WBCSD GHG Protocols and ISO 14064 GHG Standards.

Collaboration.

By collaborating with a network of top research and not-for-profit organizations, we connect you with the latest GHG knowledge and tools.

- We co-founded the Greenhouse Gas Management Institute with the GHG Experts Network, in partnership with the World Resources Institute, Carbon Disclosure Project, and GoVida e-Learning.
- We co-founded and serve as the main sponsor of LiveNeutral, a non-profit climate change education and carbon offset organization.

Experts You Can Trust

With more than 200 projects completed since 1998, our team's experience enables you to accelerate performance.

Testimonials

"ClimateCHECK continues to be an irreplaceable advisor for GE AES Greenhouse Gas Services' entry into the voluntary GHG credit markets. From strategy to process to the details of highly technical protocol development and validation, ClimateCHECK brings world-class experience in best practice standards. As an expert in all facets of carbon markets, ClimateCHECK is helping us set the standard in international best practices."

Karl R. Rábago
VP, Government & Regulatory Affairs
AES Alternative Energy
Director of Standards,
GE-AES Greenhouse Gas Services

"ClimateCHECK is a GHG management services provider we can trust in developing and validating GHG quantification protocols for offset projects. ClimateCHECK's formative role in the emerging standards for program design and professional practice makes their advice particularly useful to our clients in Alberta, the first GHG-regulated jurisdiction in North America."

Karen Haugen-Kozyra, MSc, PAg.
Director of Policy Development and Offset Solutions
Climate Change Central

ClimateCHECK's Contribution to the Growth of the GHG Market

The GHG Experts at ClimateCHECK have been major contributors to the development and application of GHG standards, protocols and programs used globally to establish best practices in the carbon markets and to achieve the double dividend of environmental and economic benefits.

Set.

We determine the scope of your GHG management activities—from operations to products to clean technology projects. We assess issues, risks, and opportunities.

Meet.

We work with you to create a series of action plans to incorporate GHG management within your business and operational systems. We also help you prepare for verification.

Exceed.

We enable you to lead by setting the standard. Our innovative team helps you and your stakeholders get a better return from your GHG investments.
